Deceptively complex game. Seems simple at first, but then you realize how much strategy and deception are involved. very fun.. If you enjoy deduction, psychological reasoning and outsmarting your fellow gamer (friends), THIS is the game you should dive into! Do not expect the (at least) mildly provocative common sense, as you'll find out that varying personal agendas are what makes this game as fun as the awesome pixel art graphics and fitting atmospheric eargasm-inducing ambient music would suggest. The community may still be small, but the content size is growing and so will the interest. Much more is to be expected from this outside-of-the-box game design concept.. A game where I have to lie to win. And I get to screw over random people on the internet and laugh at them when they fail. And my identity is hidden in public lobbies.. The game consists in two types of teams: agents and hackers. There are 5 nodes. As agents, you must secure 3 and as hackers, you must hack 3, in order to win. Each round consists of a talking period, which is the main one, where you chat with other players in-game: - as an agent, you try and convince other players to trust that you're an agent and try to weed out the hackers; - as a hacker, you know who your other team-mates are, and try to trick agents into thinking that you're clean. Each player, in turn, selects a certain amount of people to go on a mission at the end of each round. As a hacker, you want to have hackers selected, so they can hack the node of that round (you can also bluff, so people think you're clean) and as an agent, you want to select only agents, so that there's no chance of nodes being hacked. You must use your wits in order to weed out the hackers, as an agent, or fool the agents into thinking you or the other hackers are clean, so that you can hack the nodes. It's very fun and I recommend it.. Mindnight is a game about deduction, strategic thinking, psychology, deception and the skill of lying and convincing others. If you've ever played the party game Mafia (aka Werewolf, or its video game offshoot Town of Salem) or perhaps the card game The Resistance, you'll feel right at home. This game presents the core mechanics of The Resistance in an interesting cyperepunk setting with slick pixel art and solid music. It also is very polished (unlike Town of Salem. >>), and the developers are working hard on bringing more content to the game, including a voice chat system. They also are very open to feedback and suggestions, and active in their community. The biggest weakness of this game is that, of course, being an online game, it needs a lively online community. However, unfortunately for Mindnight, the community for this game is very small. You can't really just jump into the game and play, but have to coordinate with other players of the game on the Discord server in order to set up even 5 (let alone 8!) players. Despite that big issue, I do recommend getting this game. Mindnight deserves a healthy community to play this game. It really does. And perhaps if more people are willing to give it a shot, we will be able to get a proper community playing this intriguing game.. get it if you like to play mafia and werewolves. Good game 10 heckermens out of 10. This is "The resistance" board game in Videogame. Amazing strategy, and quick play. Straight forward and immediate. IT lacks player base (therefore. jump in!!!) but once in. be ready to fell tense for the whole time. It's amazing and I'd play this continiously.
