[4.18 MB]Added: 6/23/2013 File Size: 4.18 MB File Type: pdf, ePub, txt Last Modified: 6/23/2013This invention relates to a method for the preparation of poly(arylene thioether) polymers, more particularly to a method for preparing such polymers by reacting poly(arylene)imine, and an aryl halide such as a diaryl iodide or dibromide, in the presence of a copper catalyst, in a single step, in a solvent free system. The use of poly(arylene imines) to synthesize poly(arylene thioether) polymers is known and described in U.S. Pat. No. 4,446,277, the teachings of which are incorporated herein by reference. The patent teaches the polycondensation of a bis(imine) of the formula with an aryl halide of the formula in a suitable solvent under a nitrogen atmosphere at a temperature of about 150.degree.-300.degree 82157476af
